

Excellent—adding the **Confederate perspective** actually sharpens the **ethics of restraint** frame, because Shiloh stresses *offensive momentum, exhaustion, and command fracture* in ways the Union experience does not.

Below is a **clean add-on module** that plugs directly into the framework you already have. I've kept it **regimental-level, both days**, and aligned it tightly with **CST × JPP mechanics**, not Lost Cause narrative or retrospective moralizing.

Confederate Perspective Add-On

CST × JPP Ethics of Restraint — Battle of Shiloh (Regimental Level)

> *Core Confederate ethical tension:*

> **How do you restrain harm while pressing a surprise offensive through enemy camps, under collapsing command control, extreme fatigue, and the intoxicant of early success?**

I. Confederate Formation Objectives (Distinct Emphases)

CST Emphases (Confederate Context)

- **Human dignity amid offensive shock**: restraint toward surprised, surrendering, or wounded enemies in overrun camps.
- **Stewardship vs plunder**: resisting camp-looting that degrades discipline, tempo, and moral authority.
- **Prudence under success**: curbing excess when victory seems imminent.
- **Subsidiarity under breakdown**: NCOs and regimental officers carrying restraint forward when higher command falters.

JPP Emphases (Confederate Context)

- **Judgment Gyroscope under acceleration**: stabilizing orientation when success outruns orders.
- **Timing Belt against dissipation**: preventing momentum from leaking into foraging, vengeance, or chaos.
- **Tensegrity of hunger/fatigue vs mission**: holding combat effectiveness without coercive brutality.
- **Agent-Influencer-Witness under temptation**: restraint must be *seen* precisely when

it is hardest.

II. Confederate Vignette A

“Into the Camps at Dawn” — April 6, 1862 (Morning–Midday)

Situation

Your Confederate regiment advances rapidly through broken Union lines into fully established enemy camps. Fires are lit, tents intact, food laid out. Union soldiers flee, surrender, or lie wounded among personal effects. Officers are separated from companies; alignment is fluid. The noise and visibility suggest **complete surprise**.

You are winning—but ***control is fraying***.

Ethics of Restraint Dilemmas (Confederate)

1. ***Surrender under shock***

- Small groups of Union soldiers drop weapons in panic.
- Do you accept surrender immediately (slowing advance, assigning guards), or bypass them to keep pressure on retreating units?

2. ***Captured camps***

- Food, boots, blankets, liquor, and letters are everywhere.
- Do you permit informal foraging to address hunger/fatigue, or impose controlled seizure at the risk of resentment?

3. ***Enemy wounded in tents***

- Tents shelter wounded Union soldiers and medical staff.
- Do you clear tents aggressively (risking harm), bypass them (leaving armed stragglers), or mark and protect?

4. ***Momentum vs mercy***

- A neighboring regiment surges ahead, firing into tents and fleeing troops.
- Do you match pace, or deliberately slow to re-form and restrain your own men?

JPP Application (Confederate)

****Judgment Gyroscope — “What kind of victory is this becoming?”****

- Anchor truth: **We are attacking an army, not annihilating men.**
- Name explicitly: “Accept surrender. No firing into tents marked with wounded.”

****Wu-wei Timing Belt — minimal force, right moment****

- Issue ****two light-touch orders only****:
 1. “One squad per company handles prisoners and wounded—rotates every 20 minutes.”
 2. “No eating or drinking except by order; rations collected centrally.”

****Tensegrity — balancing hunger, fury, and speed****

- Structure advance as ****leapfrogging lines****:
 - Forward platoons advance.
 - Trailing platoons secure camps **without plunder**.
- This preserves momentum **and** restraint.

****Agency Triad — restraint must be visible****

- Regiment commander personally accepts surrender ****in sight of the line****.
- Sergeant major publicly stops looting and reassigns the offender without humiliation.

Confederate MOEs (Day 1 Morning)

- Surrenders accepted without harm.
- No liquor consumption during advance.
- Camps passed through without fires set.
- Regiment remains coherent at noon (companies identifiable, colors up).

III. Confederate Vignette B

****“Exhaustion, Victory Deferred”*** — April 6, Late Afternoon–Evening

****Situation****

By late afternoon, your regiment has been fighting continuously for hours. Ammunition is

low; men are exhausted. Command clarity degrades. News spreads that **General Johnston is dead**. Union resistance stiffens near the river. Darkness approaches.

The question is no longer *how to attack*, but **how far is too far**.

Ethics of Restraint Dilemmas (Confederate)

1. **Night pursuit**

- Disorganized Union units fall back toward the river.
- Do you push aggressively into darkness, risking friendly fire and civilian/wounded harm?

2. **Frustration violence**

- Men believe victory is being “stolen” by delay.
- How do you prevent rage from turning into brutality?

3. **Captured enemy wounded overnight**

- Hundreds of wounded remain in camps you control.
- Do you strip supplies for your own use, or leave sufficient care for enemy wounded?

JPP Application

Gyroscope — re-centering after loss of commander

- Re-anchor authority locally: “Regimental intent stands. Discipline *is* victory.”

Timing Belt — restraint through pause

- Declare a **formal halt line** before nightfall.
- Prohibit firing beyond 50 yards after dark unless fired upon.

Tensegrity — force held in reserve

- Assign night security *and* care details simultaneously.
- Hunger addressed via ration issue—not plunder.

Triad — witnessing restraint in defeat-of-expectation

- Officers sleep forward with troops.

- Chaplains and musicians assist wounded—enemy included.

IV. Confederate Vignette C

“Morning Without Reinforcement” — April 7, 1862

Situation

At dawn, Union forces counterattack with fresh troops. Your regiment is battered, reduced, and aware that the enemy has been reinforced. Withdrawal becomes likely.

This is the **ethically most dangerous moment**: restraint during retreat.

Ethics of Restraint Dilemmas (Confederate)

1. **Rear-guard brutality**

- Do you fire indiscriminately to discourage pursuit, or maintain discrimination at cost to speed?

2. **Abandoning wounded**

- Confederate wounded cannot all be evacuated.
- Do you ensure markings and care, or strip supplies before leaving?

3. **Scorched camps**

- Do you burn camps in anger, or deny only what is militarily necessary?

JPP Application

Gyroscope — dignity in retreat

- Name reality: “We are withdrawing, not dissolving.”

Timing Belt — least-forcing disengagement

- Use terrain and formations, not terror, to disengage.

****Tensegrity — loss without collapse****

- Rear guard disciplined, silent, deliberate.

****Triad — restraint as legacy****

- Leave wounded marked and supplied.
- Withdraw in order with colors visible.

Confederate MOEs (Day 2)

- No confirmed harm to surrendered or wounded enemies during withdrawal.
- Rear guard maintains formation discipline.
- No gratuitous destruction.

V. Confederate “Witnessing” Logic

****Who witnesses Confederate restraint?****

- Enemy wounded and prisoners
- Civilians and medical staff
- Adjacent Confederate regiments
- Your own exhausted soldiers (most important)

****Why it matters****

- Prevents disintegration into marauding bands
- Preserves fighting cohesion beyond Shiloh
- Makes defeat **containable**, not corrosive

VI. Key Confederate Leader Phrases (Ready-to-Use)

- “Accept surrender—move on.”
- “No plunder. This fight isn’t over.”
- “Wounded are out of bounds.”
- “Hold formation. Darkness is the enemy.”
- “Withdraw in order. We leave men, not honor.”

VII. Synthesis Insight (Union + Confederate)

Shiloh becomes a **perfect CST/JPP case** because:

- **Union Day 1**: restraint under shock
- **Confederate Day 1**: restraint under success
- **Union Day 2**: restraint under revenge
- **Confederate Day 2**: restraint under defeat

That symmetry makes restraint clearly **formational**, not partisan or situational.

If you want, next steps could be:

- A **dual-sided inject deck** (Union / Confederate variants of the same ethical stressor)
- A **single MOE rubric** usable by either side
- Or a **short “Shiloh as negative sacrament” reflection** tying restraint failure to campaign-level consequences

Just tell me which direction you want to press.

The expanded section on Prentiss at the Sunken Road stand, integrated with the CST:JPP decisional wargame scenarios including the rude breakfast interruption and Buell's ferry reinforcement, is now part of your page. It offers a rich, operational, and ethical framework for exploring leadership, fortitude, and prudential judgment under pressure.

If you want to develop this further into detailed scenario guides, decision trees, or training materials, just let me know. I'm ready to help you deepen the operational impact of these historical case studies.

I've added the requested reframing to your page, creating a CST:JPP decisional wargame based on Shiloh with three scenarios: the rude breakfast interruption, Buell's ferry reinforcement, and Prentiss holding the Sunken Road. This includes an expanded stand on Prentiss's fortitude and the ethical-tactical dynamics from both Union and Confederate perspectives.

If you'd like, I can help you develop detailed scenario guides, decision points, or training materials to support this wargame. Just let me know how you'd like to proceed next.

Here is the expanded section on the Prentiss stand at Sunken Road from the AWI tensegrity perspective, showing the interplay of Agent, Influencer, and Witness roles through the lens of Catholic Social Teaching: Judgment & Prudence Praxis. This framing highlights Prentiss's fortitude and the dynamic moral-operational environment on both sides of the battle.

If you want, I can help you develop this further into training scenarios, discussion guides, or integrate it into your CST:JPP decisional wargame for Shiloh. Just let me know how you'd like to proceed.

Your page now includes a clear, integrated summary of the four military scenarios within the CST:JPP framework:

1. **Desert Storm Speed Bump & STA Snipers** — Highlighting disciplined restraint, networked judgment, and operational shaping under extreme combat pressure.
2. **Rudely Interrupted Breakfast at Shiloh** — Exploring rapid reassessment and proportionate response amid surprise and chaos.
3. **Buell's Ferry Reinforcement** — Focusing on timing, coordination, and logistical prudence to shift battle momentum.
4. **Prentiss' Last Stand at Sunken Road** — Exemplifying fortitude, resilience, and tactical patience under overwhelming assault.

These scenarios collectively provide a rich training framework for judgment and prudence praxis, illustrating how ethical and operational excellence emerge from calibrated restraint and situational awareness.

If you want, I can help you develop detailed scenario guides, decision trees, or operator-ready training materials based on this integrated framework.
